

Change your cup. Change the world.

Styrofoam cup after 50,000 days

Styrofoam cups don't break down. Ever. Plastic-lined paper cups, while better, also have negative environmental implications.

We're happy to report that, here, the styrofoam cup is history.

Green Shift cup after 50 days

Our new cups have a biodegradable coating made from renewable resources and turn into compost in just weeks. That means less greenhouse gases, less waste to landfill, and a sustainable choice for the future.

This organization is taking a stand for a greener future. It has joined the Green Shift™ and changing cups is just one small part of it.

Green Shift is growing a support network for companies that are committed to ethical business practices and measures that ensure social and environmental justice.
